

Avantopool (Hanki) filtering package

The optional filtering package protects the cooling unit (APCU032) from dirt particles and also keeps them away from the water circulation. The filter housing comes with hoses and connectors, ball valves and quick connectors. Package also includes one filter inside the housing and 1 extra filter.

Filters must be cleaned at least on weekly basis. Dirty filter will compromise the water flow.

Description

Filter housing

9"3/4 housing for 9"3/4 RLA 80MIC filter cartridges, head with brass insert, clear body, hoses with connectors and two ball valves pre-attached. Comes with a wrench for easy detaching of the end cap.
